 Home Energy Score Help

Rule Help:

- Enter a value from 1 to 10 with 10 being the most energy efficient

General Field Help:

*The Home Energy Score is used for existing homes and helps consumers understand the energy performance of older homes built before modern (2003) energy codes. A home is ranked on a scale of 1-10 with 10 being the most efficient.

Other Matrix Updates

- Basement Ceiling Height:** The input restriction on Basement Ceiling Height has been removed, allowing you to more accurately indicate the true height of the ceiling.
 - There are a few ways to enter Basement Ceiling Height to indicate the number of feet and inches, such as 9, 9 feet, 9.5, 9'5", or 9 ft 5 in.
 - There is a 10 character limit on this field.
 - If using Basement Ceiling Height as part of your search criteria, be sure to use the wildcard (*) since there are a variety of ways the information could be entered. For example, if you're searching for a basement that is 9 feet, you could enter 9* as your search criteria.
- Removed Requirement for Land Parking fields:** When entering a Land listing, it is no longer necessary to enter any parking information.

Note: Since the Parking fields are shared across all property types, the asterisk (*) indicating the field is required is still display. The labels and help text in the parking section indicate these fields are not required for Land.

- When entering New Home Plans:
 - The Green Features field has been updated to allow multiple options to be selected.
 - Basement Finished is no longer a required field.
- On listing input, a new school district validation rule has been applied to Residential Attached, Residential Detached and Rentals. This rule will remind the agent to update the schools if the school district has been changed on the Input form.
